Hi Concern,

I've been a professional mobile app developer with a wide range of experience in iOS, Android, Flutter native & hybrid app development. I've contributed to numerous releases of iOS & Android applications for clients ranging from startups to global corporations.

Working process:

At first, I try to understand the expectation of the client clearly, and then according to the design, I start to build a layout and pixel-perfect responsive UI. I implement Flutter magnificent animation in the application as per client demand. I use to manage app state through Getx, BLoC, and Provider as per necessity. Finally, I connect Rest API through Dio or http request to make the app fully functional and live. If the client seeks any fixation then I fix all issues and deliver the project.

Portfolio:

I have experience of building a bunch of real-life complex and gigantic client projects, such as-

- Batch-Learn
- Cap-Novea
- Pandascrow
- Money Management
- Foodies
- To-do list
- Time-Tracker

You can get my published app from the Google play store from the given link.

I'm a great problem solver professional with magnificent communication & collaboration skills with skype, Slack, Discord, Google meets, Zoom so on; plus an advanced proficiency in project management with Jira/GitHub/Bitbucket/Asana/Redmine, etc.

My belt of experience includes :

- iOS, Android,

- Flutter, Dart, C, C++, HTML, CSS

- Client/server, database/web interfaces

I have experience working with two large companies as full-time employee, such as –

- Circle Panda
- BoomDevs

I'm ready to help and bring your ideas into reality, so don't hesitate to knock me to discuss projects in detail.

Thanks!
